5 Road safety: What are the measures to be adopted in the design of the road to prevent accidents?

G. Jayaprakash

Bomb craters and vehicles at night without lights in the open market to rely only on our local roads are even higher. In particular, Anna Salai, a few major roads, including the highway than the nearest Malli, holistic care, without signal are numerous roads. Tum farsighted planning with road designs, are the main causes of road accidents in the maintain.

Road infrastructure improvement is maximized, giving the right information to the people in need, emergency rescue, accident-part series to make the public aware of the availability of narvai can reduce road accidents and deaths. On the road to close the sewer pit fall accident on the road, somewhat in the braking of the hoist will be an accident, the seats in the warning notice board of the lack and poor road system formation, pedestrians, road to cross contaminated, where needed expansion of the road that does not include the off-road design flaws of the show.

Citizen Consumer and civil Ogg Shanmuga Group (CAG), the organization's director (Aloe Lord) escaroja, analyst Sumana Narayanan said the attack on the safety of the road:

The design of the road is important to reduce road accidents. While the number of vehicles increasing day by day, matching the design of the road paving projects and tasks to undertake far-reaching bill.

Vote for narkal enough leisure centers, centers will be set up to provide emergency medical care. Since both vehicles speeding on the highway, looking ahead to the nankalai vehicles on the roads should be straight to tame. Large arches have to be removed.

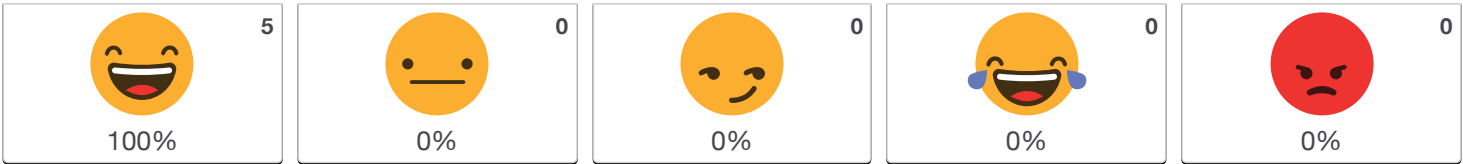

To those in the developed countries to speed up, slow goers enjoy the single account. Slow road to go fast, go fast on the road to slow down and you'll be fine.

Then, traffic easing congestion, accidents can be reduced. Also, the width of the road in an area, and another area to avoid being narrowed. The pits must be set up and maintain the sewer system. Speed restrictions should be set at the same level. Where needed to facilitate parking.

Thus, they said.
